

HEAT IS PRECIOUS

ENERGY BOX

Recovering compression heat

Energy Box

Energy Recovery System

DON'T WASTE ENERGY

- Your compressed air installation produces heat.
- This heat is evacuated via the cooling system.
- That's a big waste of thermal energy.
- Recovery and re-use of the heat is easy!

RECOVER AND RE-USE

- The Energy Box is a simple and efficient solution, easy to install.
- It captures the heat and makes it available in your plant, where it can be used for multiple purposes.
- This helps you optimize your overall energy consumption and greatly reduce CO2 emissions.
- By reducing your compressor room temperature, it contributes to the reliable performance of your equipment.

80%

of a compressor's thermal energy can be recovered with
the Energy Box

The Energy Box can be used for

Industrial processes

Office heating

Boilers
